Call for Papers

The PTS Coating Symposium 2023 focuses mainly on fibre based packaging materials. Various, mostly legal initiatives from countries all over Europe force distributors of packaging to be more sustainable. This led to huge research efforts in establishing paper and board material, together with barrier coatings as packaging material.

The road is long and winding, so one has to cope with optimizing barrier performance, dealing with new feedstocks, migration, impact on recycling, different behavior in processing and integration of smart functions. These issues triggered development in machinery and suppliers industry. We want you to present latest news in your business to a broad audience with relevant customers and partners along. Please share successful cooperations, new products, a problem-solving or a development story. We aim for presentations from paper manufacturers, converters, machinery suppliers, measurement and quality control suppliers and chemical industry and research institutes.

We expect around 300 participants to be part of 2023 edition in Bamberg. As PTS we would like to present and initiate new innovations and product ideas. We want to facilitate new cooperations between international players from several sectors along the coated paper and packaging value chain. The two-day symposium will again provide opportunities to get in touch with each other, to exchange the latest innovations and discuss trends. Use the event to expand and deepen your network in a relaxed and pleasant atmosphere.

Deadline for Submission until 30.04.2023!

SUBMISSION & FORMAT:

- Meaningful summaries in English
- Conference language: English
- Maximum one DIN-A4 page
- Indication of authors and companies involved
- Send your summary to the PTS Academy Team
- Free Access for both Symposium Days

SYMPOSIUM FOCUS:

- New Coating Materials
- Applications
- Coating equipment
- Methods and Processes
- Market trends
- Characterization of surfaces
- Process and quality control
- Coating of fibre based materials
